Announcements

Quiz 1

- Available now!
- Due 18:00 Wednesday 21 February (AEDT) (next week)
- Tests what you will learn this lecture

Assignment 1

- Available now!
- Due 18:00 Thursday 29 February (AEDT) (in 2 weeks)
- The first question tests material from today's lecture.
- The other questions test material from next week's lectures.

Available support available to help with the above

- In-person help sessions (immediately after this lecture!) And every Thursday and Friday
- Online consultations (Tuesday and Wednesday evenings)
- edforum

L

Topic 0: Number Theory

Further reading

If you'd like to read more about the topics covered in this lecture, check out the following chapters of the recommended textbooks:

[LLM] [RW] Week 1 Number Theory Ch. 8 Ch. 1, 3

- [RW] is KA Ross and CR Wright: Discrete Mathematics
- [LLM] is Lehman, Leighton, Meyer: Mathematics for Computer Science

Number Theory in Computer Science

In this course, we are interested in **discrete mathematics**. This is the theory of e.g. the integers.

Continuous mathematics instead considers number systems with no "gaps", e.g. the real numbers.

Applications of discrete number theory include:

- Cryptography/Security (primes, divisibility)
- Large integer calculations (modular arithmetic)
- Date and time calculations (modular arithmetic)
- Solving optimization problems (integer linear programming)
- Interesting examples for future topics in this course

Question

What is something that is easy to do with real numbers but hard to do with integers?

Notation for numbers

Definition

- Natural numbers $\mathbb{N} = \{0, 1, 2, \ldots\}$
- Integers $\mathbb{Z} = \{..., -1, 0, 1, 2, ...\}$
- Positive integers $\mathbb{N}_{>0}=\mathbb{Z}_{>0}=\{1,2,\ldots\}$
- Rational numbers (fractions) $\mathbb{Q} = \left\{ \begin{array}{l} \frac{m}{n} : m, n \in \mathbb{Z}, n \neq 0 \end{array} \right\}$
- Real numbers (decimal or binary expansions) \mathbb{R} $r = a_1 a_2 \dots a_k \cdot b_1 b_2 \dots$

In $\mathbb N$ and $\mathbb Z$ different symbols denote different numbers.

$$1 \neq 2 \neq 3$$

In $\mathbb Q$ and $\mathbb R$ the standard representation is not necessarily unique.

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6}$$

It's quite easy to intuitively understand what the real numbers $\mathbb R$ or the natural numbers $\mathbb N$ are.

It's quite easy to intuitively understand what the real numbers $\mathbb R$ or the natural numbers $\mathbb N$ are.

But it's surprisingly difficult to write a precise mathematical explanation of this!

It's quite easy to intuitively understand what the real numbers $\mathbb R$ or the natural numbers $\mathbb N$ are.

But it's surprisingly difficult to write a precise mathematical explanation of this!

NB

Proper ways to introduce reals include Dedekind cuts and Cauchy sequences.

Natural numbers etc. are either axiomatised or constructed from sets ($0 \stackrel{\text{def}}{=} \{\}$, $n+1 \stackrel{\text{def}}{=} n \cup \{n\}$)

Dedekind cuts and Cauchy sequences are far beyond the scope of this course.

We will see **set theory** next week (and then the above definition for the natural numbers will make a bit more sense).

Floor and ceiling

Definition

- $|.|: \mathbb{R} \longrightarrow \mathbb{Z}$ **floor** of x, the greatest integer $\leq x$
- $[.]: \mathbb{R} \longrightarrow \mathbb{Z}$ **ceiling** of x, the least integer $\geq x$

Example

$$\lfloor \pi \rfloor = 3 = \lceil e \rceil$$
 $\pi, e \in \mathbb{R}; \ \lfloor \pi \rfloor, \lceil e \rceil \in \mathbb{Z}$

Floor and ceiling

Definition

- $[.]: \mathbb{R} \longrightarrow \mathbb{Z}$ **floor** of x, the greatest integer $\leq x$
- $[.]: \mathbb{R} \longrightarrow \mathbb{Z}$ **ceiling** of x, the least integer $\geq x$

Example

$$\lfloor \pi \rfloor = 3 = \lceil e \rceil$$
 $\pi, e \in \mathbb{R}; \ \lfloor \pi \rfloor, \lceil e \rceil \in \mathbb{Z}$

Simple properties

- $\bullet |-x| = -\lceil x \rceil$, hence $\lceil x \rceil = |-x|$
- For all $t \in \mathbb{Z}$:
 - $\lfloor x+t \rfloor = \lfloor x \rfloor + t$ and
 - $\bullet \ \lceil x + t \rceil = \lceil x \rceil + t$

Fact

Let $k, m, n \in \mathbb{Z}$ such that k > 0 and $m \ge n$. The number of multiples of k between n and m (inclusive) is

$$\left\lfloor \frac{m}{k} \right\rfloor - \left\lfloor \frac{n-1}{k} \right\rfloor$$

Absolute value

Definition

$$|x| = \begin{cases} x & \text{, if } x \ge 0 \\ -x & \text{, if } x < 0 \end{cases}$$

$$|3| = |-3| = 3$$
 $3, -3 \in \mathbb{Z}; |3|, |-3| \in \mathbb{N}$

Exercises

RW: 1.1.4

- (b) $2\lfloor 0.6 \rfloor \lfloor 1.2 \rfloor =$ $2\lceil 0.6 \rceil - \lceil 1.2 \rceil =$ (d) $\lceil \sqrt{3} \rceil - \lceil \sqrt{3} \rceil =$
- RW: 1.1.19
 - (a) Give x, y such that $\lfloor x \rfloor + \lfloor y \rfloor < \lfloor x + y \rfloor$:

- 20T2: Q1 (a)
 - (i) True or false for all $x \in \mathbb{R}$: $\lceil |x| \rceil = |\lceil x \rceil|$

Exercises

RW: 1.1.4

- (b) $2 \lfloor 0.6 \rfloor \lfloor 1.2 \rfloor = -1$ $2 \lceil 0.6 \rceil - \lceil 1.2 \rceil = 0$ (d) $\lceil \sqrt{3} \rceil - \lceil \sqrt{3} \rceil = 1$
- RW: 1.1.19
 - (a) Give x, y such that $\lfloor x \rfloor + \lfloor y \rfloor < \lfloor x + y \rfloor$: x = y = 0.9
- 20T2: Q1 (a)
 - (i) True or false for all $x \in \mathbb{R}$: [|x|] = |[x]| false (e.g. x = -1.5)

Definition

For $m, n \in \mathbb{Z}$, we say m divides n if $n = k \cdot m$ for some $k \in \mathbb{Z}$.

We denote this by m|n

Also stated as: 'n is divisible by m', 'm is a divisor of n', 'n is a multiple of m'

Definition

For $m, n \in \mathbb{Z}$, we say m divides n if $n = k \cdot m$ for some $k \in \mathbb{Z}$.

We denote this by m|n

Also stated as: 'n is divisible by m', 'm is a divisor of n', 'n is a multiple of m'

 $m \nmid n$ is the negation of $m \mid n$.

Definition

For $m, n \in \mathbb{Z}$, we say m divides n if $n = k \cdot m$ for some $k \in \mathbb{Z}$.

We denote this by m|n

Also stated as: 'n is divisible by m', 'm is a divisor of n', 'n is a multiple of m'

 $m \nmid n$ is the negation of $m \mid n$. In other words, $m \nmid n$ means 'm does not divide n'

Definition

For $m, n \in \mathbb{Z}$, we say m divides n if $n = k \cdot m$ for some $k \in \mathbb{Z}$.

We denote this by m|n

Also stated as: 'n is divisible by m', 'm is a divisor of n', 'n is a multiple of m'

 $m \nmid n$ is the negation of $m \mid n$. In other words, $m \nmid n$ means 'm does not divide n'

NB

Notion of divisibility applies to all integers — positive, negative and zero.

Exercises

True or *False* for all $n \in \mathbb{Z}$:

- 1|n
- -1|n
- 0|*n*
- n|0

RW: 1.2.2

- (a) n|1
- (b) n|n
- (c) $n | n^2$

Exercises

True or *False* for all $n \in \mathbb{Z}$:

- 1|n true
- -1|n true
- 0|n false (only when n=0)
- n|0 true

RW: 1.2.2

- (a) n|1 false (only when $n = \pm 1$)
- (b) n|n true
- (c) $n|n^2$ true

gcd and lcm

Definition

Let $m, n \in \mathbb{Z}$.

- The greatest common divisor of m and n, gcd(m, n), is the largest positive $d \in \mathbb{Z}$ such that d|m and d|n.
- The **least common multiple** of m and n, lcm(m, n), is the smallest positive $k \in \mathbb{Z}$ such that m|k and n|k.
- Exception: gcd(0,0) = lcm(0,n) = lcm(m,0) = 0.

Example

$$gcd(-4,6) = gcd(4,-6) = gcd(-4,-6) = gcd(4,6) = 2$$

 $lcm(-5,-5) = \dots = 5$

gcd and lcm

NB

gcd(m, n) and lcm(m, n) are always taken as non-negative even if m or n is negative.

Fact

$$gcd(m, n) \cdot lcm(m, n) = |m| \cdot |n|$$

Primes and relatively prime

Definition

- A number n > 1 is **prime** if it is only divisble by ± 1 and $\pm n$.
- m and n are relatively prime if gcd(m, n) = 1

- 2, 3, 5, 7, 11, 13, 17, 19 are all the primes less than 20.
- 4 and 9 are relatively prime; 9 and 14 are relatively prime.

Exercises

RW: 1.2.7(b) $\gcd(0, n) \stackrel{?}{=}$

RW: 1.2.12 Can two even integers be relatively prime?

RW: 1.2.9 Let m, n be positive integers.

- (a) What can you say about m and n if $lcm(m, n) = m \cdot n$?
- (b) What if lcm(m, n) = n?

Exercises

RW: 1.2.7(b) $\gcd(0, n) \stackrel{?}{=}$

RW: 1.2.12 Can two even integers be relatively prime?

RW: 1.2.9 Let m, n be positive integers.

(a) What can you say about m and n if $lcm(m, n) = m \cdot n$?

(b) What if lcm(m, n) = n?

Exercises

RW: 1.2.7(b) $\gcd(0, n) \stackrel{?}{=} |n|$

RW: 1.2.12 Can two even integers be relatively prime?

RW: 1.2.9 Let m, n be positive integers.

- (a) What can you say about m and n if $lcm(m, n) = m \cdot n$?
- (b) What if lcm(m, n) = n?

Exercises

RW: 1.2.7(b) $\gcd(0, n) \stackrel{?}{=} |n|$

RW: 1.2.12 Can two even integers be relatively prime? No. (why?)

RW: 1.2.9 Let m, n be positive integers.

- (a) What can you say about m and n if $lcm(m, n) = m \cdot n$?
- (b) What if lcm(m, n) = n?

Exercises

RW: 1.2.7(b) $\gcd(0, n) \stackrel{?}{=} |n|$

RW: 1.2.12 Can two even integers be relatively prime? No. (why?)

RW: 1.2.9 Let m, n be positive integers.

(a) What can you say about m and n if $lcm(m, n) = m \cdot n$? They must be relatively prime since always $lcm(m, n) = \frac{mn}{\gcd(m, n)}$

(b) What if lcm(m, n) = n? m must be a divisor of n

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

$$gcd(45, 27) =$$

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

$$gcd(45,27) = gcd(18,27)$$

= $gcd(18,9)$
= $gcd(9,9)$
= 9

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

$$gcd(108,8) =$$

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

```
gcd(108,8) = gcd(100,8)
= gcd(92,8)
\vdots :
= gcd(8,4)
= gcd(4,4)
= 4
```

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

Fact

For m > 0, n > 0 the algorithm always terminates.

$$\gcd(m, n) = \begin{cases} m & \text{if } m = n \\ \gcd(m - n, n) & \text{if } m > n \\ \gcd(m, n - m) & \text{if } m < n \end{cases}$$

Fact

For m > 0, n > 0 the algorithm always terminates.

Fact

For $m, n \in \mathbb{Z}$, if m > n then gcd(m, n) = gcd(m - n, n)

Fact

For $m, n \in \mathbb{Z}$, if m > n then gcd(m, n) = gcd(m - n, n)

Proof.

Fact

For $m, n \in \mathbb{Z}$, if m > n then gcd(m, n) = gcd(m - n, n)

Proof.

We first show that for all $d \in \mathbb{Z}$, (d|m and d|n) if, and only if, (d|m-n and d|n):

21

Fact

For $m, n \in \mathbb{Z}$, if m > n then gcd(m, n) = gcd(m - n, n)

Proof.

We first show that for all $d \in \mathbb{Z}$, (d|m and d|n) if, and only if, (d|m-n and d|n):

" \Rightarrow ": if d|m and d|n then $m = a \cdot d$ and $n = b \cdot d$, for some $a, b \in \mathbb{Z}$, so $m - n = (a - b) \cdot d$.

hence d|m-n

Fact

For $m, n \in \mathbb{Z}$, if m > n then gcd(m, n) = gcd(m - n, n)

Proof.

We first show that for all $d \in \mathbb{Z}$, (d|m and d|n) if, and only if, (d|m-n and d|n):

" \Rightarrow ": if d|m and d|n then $m = a \cdot d$ and $n = b \cdot d$, for some $a, b \in \mathbb{Z}$, so $m - n = (a - b) \cdot d$,

hence d|m-n

"\(\infty\)": if d|m-n and d|n then $m-n=a\cdot d$ and $n=b\cdot d$, for some $a,b\in\mathbb{Z}$,

so
$$m = (m - n) + n = (a + b) \cdot d$$
,
hence $d \mid m$

Fact

For $m, n \in \mathbb{Z}$, if m > n then gcd(m, n) = gcd(m - n, n)

Proof.

We first show that for all $d \in \mathbb{Z}$, (d|m and d|n) if, and only if, (d|m-n and d|n):

"
$$\Rightarrow$$
": if $d|m$ and $d|n$ then $m = a \cdot d$ and $n = b \cdot d$, for some $a, b \in \mathbb{Z}$, so $m - n = (a - b) \cdot d$,

hence
$$d|m-n$$

" \Leftarrow ": if d|m-n and d|n then $m-n=a\cdot d$ and $n=b\cdot d$, for some $a,b\in\mathbb{Z}$,

so
$$m = (m - n) + n = (a + b) \cdot d$$
,
hence $d \mid m$

Therefore, any common divisor of m and n is a common divisor of m-n and n, and vice versa.

Fact

For $m, n \in \mathbb{Z}$, if m > n then gcd(m, n) = gcd(m - n, n)

Proof.

We first show that for all $d \in \mathbb{Z}$, (d|m and d|n) if, and only if, (d|m-n and d|n):

" \Rightarrow ": if d|m and d|n then $m = a \cdot d$ and $n = b \cdot d$, for some $a, b \in \mathbb{Z}$, so $m - n = (a - b) \cdot d$,

hence
$$d|m-n$$

"\(\infty\)": if d|m-n and d|n then $m-n=a\cdot d$ and $n=b\cdot d$, for some $a,b\in\mathbb{Z}$,

so
$$m = (m - n) + n = (a + b) \cdot d$$
,
hence $d \mid m$

Therefore, any common divisor of m and n is a common divisor of m-n and n, and vice versa.

Therefore, the greatest common divisor of m and n is the greatest common divisor of m-n and n.

Euclid's division lemma

Fact

For $m \in \mathbb{Z}$, $n \in \mathbb{Z}_{>0}$ there exists $q, r \in \mathbb{Z}$ with $0 \le r < n$ such that

$$m = q \cdot n + r$$

Euclid's division lemma

Fact

For $m \in \mathbb{Z}$, $n \in \mathbb{Z}_{>0}$ there exists $q, r \in \mathbb{Z}$ with $0 \le r < n$ such that

$$m = q \cdot n + r$$

Observe:

•
$$q = \lfloor \frac{m}{n} \rfloor$$

Euclid's division lemma

Fact

For $m \in \mathbb{Z}$, $n \in \mathbb{Z}_{>0}$ there exists $q, r \in \mathbb{Z}$ with $0 \le r < n$ such that

$$m = q \cdot n + r$$

Observe:

- $q = \lfloor \frac{m}{n} \rfloor$
- \bullet $r = m q \cdot n$

Definition

Let $m, p \in \mathbb{Z}$, $n \in \mathbb{Z}_{>0}$.

- $m \operatorname{div} n = \lfloor \frac{m}{n} \rfloor$
- $m \% n = m (m \operatorname{div} n) \cdot n$
- $m =_{(n)} p \text{ if } n | (m p)$

Definition

Let $m, p \in \mathbb{Z}$, $n \in \mathbb{Z}_{>0}$.

- $m \text{ div } n = \lfloor \frac{m}{n} \rfloor$
- $m \% n = m (m \operatorname{div} n) \cdot n$
- $m =_{(n)} p$ if $n \mid (m-p)$

Important!

 $m =_{(n)} p$ is **not standard**. More commonly written as

$$m = p \pmod{n}$$

- $0 \le (m \% n) < n$.
- $m =_{(n)} p$ if, and only if, (m % n) = (p % n).

- $0 \le (m \% n) < n$.
- $m =_{(n)} p$ if, and only if, (m % n) = (p % n).
- $m =_{(n)} (m \% n)$

- $0 \le (m \% n) < n$.
- $m =_{(n)} p$ if, and only if, (m % n) = (p % n).
- $m =_{(n)} (m \% n)$
- If $m =_{(n)} m'$ and $p =_{(n)} p'$ then:
 - $m + p =_{(n)} m' + p'$ and
 - $m \cdot p =_{(n)} m' \cdot p'$.

- 42 div 9 $\stackrel{?}{=}$
